To whom it may concern,

The Faculty of Engineering and Quantity Surveying at INTI International University is supportive of Dr. Cecilia Chan's research on the assessment and development of generic skills.

The assessment of generic skills means a lot to promoting holistic education and yet has remained unclear for years. In order to truly motivate students to enhance generic skill development and to drive curriculum reform, both a more in-depth understanding and effective approach to assess generic skills are very much needed.

We have formed good partnership with Dr. Chan, whose research instrument and model were adopted in our Faculty to enhance students' generic skills. Our past collaboration yielded fruitful results, and have helped our students to develop generic skills. Through employing Dr. Chan's latest research inventory and e-platform (YOCLE) on generic skills, organizing masterclasses to improve the teaching and assessment of generic skills, I believe not only students from INTI would benefit from this process, but we would contribute to transforming the education landscape and mindsets towards a more balanced, holistic development of our students.

Should more information be needed, please feel free to contact me.

Best regards,

Yin Ling Lai, PhD

Dean

Faculty of Engineering and Quantity Surveying
